Wordly is a cloud based platform that provides realtime simultaneous interpretation from one language to multiple languages, all powered by AI.

This document provides instructions on how to add languages to your Windows machine to enable TTS to be used on Wordly.

**Instructions:**

2. Click on Add a preferred Language
3. Search the language package you need to add. (example here is Spanish - Mexican)
4. You can use the language once the package is downloaded

Make sure the Text to Speech is selected (should be defaulted in the language package like below)
5. Package will start downloading (Could take upto 15 mins)

6. You should see the icons on the downloaded package like shown below.
